APCERT, OIC-CERT participate in global cyber security drill, CyberSecurity Malaysia announces

April 1, 2014

This year's annual drill to test the response capability of Computer Emergency Response Teams (CSIRTS) from the Asia Pacific economies involved the participation of the European Government CIRT group as well as the Organisation of Islamic Cooperation - Computer Emergency Response Team.

The participation and involvement of the OIC-CERT members in the annual cyber exercise has increased their capability and quality of incident response that CSIRT fosters in assuring Internet security and safety.

For the first time, European response teams are involved in the Asia Pacific Computer Emergency Response Team together with OIC-CERT.
